

Breakfast in the Classroom Strap Instructions for Carts with Shortened Straps

To ensure safety of personnel and safeguarding of equipment, the strap on the cart must reach around both of the insulated bags and secured in place around the cart handle. For carts with insufficient strap length, the following modifications to the vendor assembled carts must be followed;

- Remove the strap from the back of the bottom of the cart.
- Reattach the strap to the front of the bottom of the cart.

Step 1

Do not cut the strap. The strap is attached to back of the bottom of the cart using a loop knot. Loosen the loop knot to create some slack. Pull the strap through the loop to remove the strap.

Step 2

Attach the strap to the front of the undercarriage of the cart. Attach using a loop knot.
