PACIFIC PALISADES, CALIFORNIA

RE: SUMMARY OF BASEBALL FIELD EXCAVATION

Dear Mr. Tesfaslasie:

TRC Solutions, Inc. (TRC) presents this Technical Memorandum summarizing the results from the baseball field soil sampling and excavation activities for the Los Angeles Unified School District (LAUSD) Palisades Charter High School (Palisades HS) located at 15777 Bowdoin Street, Pacific Palisades, California (the Site; **Figures 1 and 2**).

OBJECTIVE AND BACKGROUND

Following the recent Pacific Palisades wildfires, the top six to twelve inches of soil cover from the baseball field area were excavated to accommodate the placement of interim housing portables. Prior to the start excavation activities, soil sampling was conducted for the purpose of waste characterization for off-Site disposal. The soil was then excavated during grading and trenching activities related to the conversion of the baseball field into a temporary construction worksite and staging area.

SOIL SAMPLING ACTIVITIES

On March 5, 2025, TRC staff collected 12 soil samples at six boring locations throughout the baseball athletic field area, identified as borings SB-1 through SB-6 (**Figure 3**). Two soil samples were collected from each location at approximately 0.5-feet below ground surface (bgs) and approximately 1.0-feet bgs using hand-auger drilling equipment. Sampling equipment (e.g., hand auger) was decontaminated before work began and between sampling locations using a combination of water and Liquinox and rinsed with clean water from a municipal source. After collecting the samples, the boring locations were backfilled with the excess soil removed during sampling.

Laboratory Analysis

All soil samples collected during this event were sent to Eurofins Environment Testing Southwest (Eurofins), a California state-certified laboratory, and were analyzed for the following:

- Volatile Organic Compounds VOCs by EPA Method 8260B
- GRO/DRO/ORO via Method 8015B
- CAM-17 Metals via Method 6010B/7471A

- Asbestos via PLM
- Soluble Threshold Limit Concentration (STLC) Lead and Arsenic

Soil samples were collected in laboratory-provided glass sample collection jars. The sample containers were labeled with a sample identification number, date and time, and stored in a cooler with ice pending transport to Eurofins for analysis under chain-of-custody protocol. Sample collection, handling, preservation, shipment, and chain-of-custody procedures were conducted in accordance with standard regulatory protocols.

A summary of the soil analytical results is presented in **Table 1**. The complete laboratory analytical report is included in **Appendix A**.

FINDINGS

The sample analytical results were tabulated and compared with federal Resource Conservation and Recovery Act (RCRA) and California State Non-RCRA hazardous waste criteria (**Table 1**). No compounds were detected above their respective RCRA or Non-RCRA Hazardous Waste thresholds.

EXCAVATION ACTIVITIES

Removal and grading activities of the baseball athletic field area were conducted between April 23 and May 9, 2025, by Howard Contracting, Inc. Between April 25 through April 29, 2025, the baseball field was excavated to a minimum depth six inches bgs. The total quantity of excavated soils during excavation was approximately 1,498 cubic yards, and the final weight was approximately 2,750 tons. Following the initial removal of the top six inches of soil material, additional excavation/trenching for utility placement, soil grading, and placement of and compaction of new base material took place between April 30 and May 9, 2025. During soil excavation and earthwork activities, a water truck using water form a municipal source was utilized for dust suppression, and the soil drop height into the roll-off bin/truck bed height was minimized to control the dispersion of particulate matter. All trucks used for transporting waste off-site disposal were checked for stray material prior to leaving the Site and exited the Site through a track-out prevention zone consisting of rumble plates to capture stray material prior to the vehicle leaving the Site. In addition, dump truck beds were checked to ensure that each load was securely covered. Each soil load was transported off-site to its designated receiving facility under manifest and logged according to its destination facility. Approximately 300 cubic yards of soil material excavated for utility trenching was stockpiled and sampled for reuse on Site. A stockpile sampling and certification report is included in **Appendix B**.

EXCAVATION DUST MONITORING

Disturbance and handling of soils was conducted in accordance with the South Coast Air Quality Management District (SCAQMD) Rule 403 (Fugitive Dust) to monitor, control, and mitigate the release of dust and toxic air contaminants from the work zone into the atmosphere.

Ambient weather conditions including wind speed and direction were monitored continuously by TRC staff in real time utilizing a DAVIS Vantage Pro 2 wireless weather station during soil disturbance activities. Weather data was recorded using a remote-based data acquisition system. Seasonal prevailing wind direction and daily wind direction were used to assist with placement of the upwind and downwind dust monitoring stations, and wind speed data was used to assist with decision-making regarding Site controls. If sustained winds were observed at more than 15 miles per hour averaged over a 15-minute period, or if instantaneous wind speeds exceeded 25 miles per hour, work activities were paused until the wind was observed below the action levels.

TRC performed continuous real-time dust monitoring during soil disturbance activities by utilizing two direct-reading particulate monitors (TSI DustTrak DRX 8533 Aerosol Monitors). The monitors were strategically placed surrounding the work area to capture upwind and downwind monitoring data relative to the prevailing wind direction. The location of the downwind monitor was adjusted, if necessary, based upon sustained changes to the prevailing wind direction as indicated by the weather station. Both monitors measured particulate matter at 10 microns (PM10). Each monitor was set to record continuous PM10 readings at one-minute intervals during soil disturbance activities. In the event the difference in upwind and downwind PM10 concentration exceeded a 120-minute rolling average of 25 micrograms per cubic meter (µg/m3), earth-moving activities would be discontinued and appropriate dust control measures implemented (i.e., application of water to work areas). The monitors were maintained and calibrated in compliance with the manufacturer's instructions and SCAQMD Rule 1466. Dust monitoring logs are included in **Appendix C**.

WASTE HANDLING AND DISPOSAL

Between April 25 and April 29, 2025, a total of 107 truckloads of non-hazardous soil was transported to the Simi Valley Landfill located at 2801 Madera Road Simi Valley, California 93065. A total of approximately 1,498 cubic yards and 2,750 tons of non-hazardous soil and construction debris were transported off-Site under Non-Hazardous Waste Manifest for disposal. A trucking and manifest log and copies of the final soil waste manifests and weight tickets are presented in **Appendix D**. Note that at the time of this report, some final manifests and weight tickets are still pending receipt, and that the final tonnage is estimated. Additional final manifests, weight tickets, and updated weight totals can be provided in the future under separate cover.

DISCUSSIONS AND RECOMMENDATIONS

The soil sampling and analysis, and excavation and monitoring activities conducted at the Palisades Charter High School baseball athletic field addressed potential environmental and human health concerns associated with the recent Pacific Palisades wildfires with respect to the use of this area as a construction staging area. Soil analytical results confirmed that no compounds exceeded federal or state hazardous waste thresholds, and all soil handling, transportation, and disposal activities were performed in compliance with applicable regulatory standards. Dust monitoring and mitigation measures effectively minimized particulate emissions and impacts to local air quality.

If you have any questions or need additional information, please contact Colin Campbell at (213) 310-1563 or ccampbell@trccompanies.com.

Sincerely,

TRC Solutions, Inc.

Notes:

1) **Bold** indicates sample result detected above laboratory Method Detection Limit (MDL).

mg/kg = Micrograms per kilogram.

<= 'Not detected at or above the indicated laboratory reporting limit (RL).

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

*1 = LCS/LCSD RPD exceeds control limits

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^1+	Initial Calibration Verification (ICV) is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
570-220817-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/5/2025 2:25 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 12.6°C.

Subcontract Work
Method Asbestos PLM (Qualitative only) 600/R-93/116: This method was subcontracted to Eurofins Built Environment Testing. The subcontract laboratory certification is different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

GC/MS VOA
Method 8260B: The following analytes recovered outside control limits for the LCS associated with analytical batch 570-541714: Vinyl chloride and Chloromethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-541714 recovered outside control limits for the following analytes: Acetone and Trichlorofluoromethane. The Laboratory control sample / laboratory control sample duplicate (LCS/LCSD) percent recovery is in control for affected analytes.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-541714.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-542192.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
Method 8015B_GRO: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-542091. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010B: The initial calibration verification (ICV) result for batch 570-542018 was above the upper control limit. The affected analytes are: Antimony. Sample results were non-detects, and have been reported as qualified data.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-541746 and analytical batch 570-542018 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 7471A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-541878 and analytical batch 570-542348 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Calscience places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Calscience laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Calscience attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Calscience.

Project: 570-431542.1; LAUSD Palisades Charter HS
EML ID: 3974354

Approved by:

Approved Signatory
Danny Li

Dates of Analysis:
Asbestos PLM: 03-07-2025

Service SOPs: Asbestos PLM (EPA 40CFR App E to Sub E of Part 763 & EPA METHOD 600/R-93-116, SOP EM-AS-S-1267)
NVLAP Lab Code 200757-0

All samples were received in acceptable condition unless noted in the Report Comments portion in the body of the report. The results relate only to the samples as received and tested. The results include an inherent uncertainty of measurement associated with estimating percentages by polarized light microscopy. Measurement uncertainty data for sample results with >1% asbestos concentration can be provided when requested.

Eurofins Built Environment Testing West, LLC ("the Company"), a member of the Eurofins Built Environment Testing group of companies, shall have no liability to the client or the client's customer with respect to decisions or recommendations made, actions taken or courses of conduct implemented by either the client or the client's customer as a result of or based upon the Test Results. In no event shall the Company be liable to the client with respect to the Test Results except for the Company's own willful misconduct or gross negligence nor shall the Company be liable for incidental or consequential damages or lost profits or revenues to the fullest extent such liability may be disclaimed by law, even if the Company has been advised of the possibility of such damages, lost profits or lost revenues. In no event shall the Company's liability with respect to the Test Results exceed the amount paid to the Company by the client therefor.

ASBESTOS PLM REPORT

Total Samples Submitted:	12
Total Samples Analyzed:	12
Total Samples with Layer Asbestos Content > 1%:	0

Location: Palisades-BF-SB1-0.5(570-220817-1) Lab ID-Version‡: 19755608-1

Sample Layers	Asbestos Content
Brown Soil	ND
Sample Composite Homogeneity:	Moderate

Location: Palisades-BF-SB1-1.0(570-220817-2) Lab ID-Version‡: 19755609-1

Sample Layers	Asbestos Content
Brown Soil	ND
Sample Composite Homogeneity:	Moderate

Location: Palisades-BF-SB2-0.5(570-220817-3) Lab ID-Version‡: 19755610-1

Sample Layers	Asbestos Content
Brown Soil	ND
Sample Composite Homogeneity:	Moderate

Location: Palisades-BF-SB2-1.0(570-220817-4) Lab ID-Version‡: 19755611-1

Sample Layers	Asbestos Content
Brown Soil	ND
Sample Composite Homogeneity:	Moderate

The test report shall not be reproduced except in full, without written approval of the laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. The Company reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified.

All components not quantified as asbestos content and non-asbestos content are considered to be non-fibrous matrix components. Matrix components may include, but are not limited to, gypsum, paint, silicate minerals, vinyl, binder, calcium carbonate, tar, and foam.

Inhomogeneous samples are separated into homogeneous subsamples and analyzed individually. ND means no fibers were detected. When detected, the minimum detection and reporting limit is less than 1% unless point counting is performed. Floor tile samples may contain large amounts of interference material and it is recommended that the sample be analyzed by gravimetric point count analysis to lower the detection limit and to aid in asbestos identification.
‡ A "Version" indicated by -"x" after the Lab ID# with a value greater than 1 indicates a sample with amended data. The revision number is reflected by the value of "x".

APPENDIX B

Stockpile Certification Report

707 Wilshire Blvd., Suite 3250 t 213.213.9400
Los Angeles, CA 90017

June 3, 2025

Mr. Filmon Tesfaslasie
Los Angeles Unified School District
Office of Environmental Health and Safety
333 S. Beaudry Avenue, 21st Floor
Los Angeles, CA 90017

SITE: LAUSD PALISADES CHARTER HIGH SCHOOL
15777 BOWDOIN ST
PACIFIC PALISADES, CALIFORNIA

RE: SUMMARY OF BASEBALL FIELD STOCKPILE SOIL SAMPLING

Dear Mr. Tesfaslasie:

TRC Solutions, Inc. (TRC) presents this Technical Memorandum summarizing the results of the soil stockpile sampling from the baseball field soil excavation activities for the Los Angeles Unified School District (LAUSD) Palisades Charter High School (Palisades HS) located at 15777 Bowdoin Street, Pacific Palisades, California (the Site; **Figures 1 and 2**)

OBJECTIVE AND BACKGROUND

Following the recent Palisades wildfires, the top six inches of soil cover was removed from the baseball athletic field area and removed from the athletic field for off-Site disposal. Subsequently, additional soil was excavated in this area during grading and trenching activities related to the conversion of the baseball field into a temporary construction worksite and staging area. The purpose of the stockpile soil sampling was to evaluate this excavated soil for potential on-Site reuse.

SOIL SAMPLING ACTIVITIES

On May 8, 2025, TRC staff collected soils samples from each of three soil stockpiles, identified as SP-1, SP-2, and SP-3 (**Figure 2**). Each stockpile was comprised of approximate 60-120 cubic yards of soil, and the estimated total volume of combined stockpiled was approximately 300 cubic yards. Each stockpile sample was collected by field-compositing soil from six discreet, approximately equidistant locations throughout the respective stockpile.

Sampling equipment (e.g., stainless steel hand trowel) was decontaminated before work began and between sampling locations using a combination of water and Liquinox and rinsed with clean water from a municipal source.

Laboratory Analysis

All soil samples were sent to Eurofins Environment Testing Southwest (Eurofins), a California state-certified laboratory under chain of custody protocols. Samples were analyzed for the following:

- Title 22 Metals by Environmental Protection Agency (EPA) Method 6010B/7471A
- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- Total Petroleum Hydrocarbons (TPH) by EPA Method 8015M

- Volatile Organic Compounds VOCs by EPA Method 8260B
- Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270C
- Polychlorinated Biphenyls (PCBs) by EPA Method 8082
- Hexavalent Chromium (CrVI) by EPA Method 7199.

VOCs were collected from one discreet location within each stockpile using a disposable TerraCore® sampler and preserved volatile organic analysis (VOA) vials.

A summary of detections from the soil analytical results is presented in **Table 1**. The complete laboratory analytical report is included in **Appendix A**.

FINDINGS

The sample analytical results were tabulated and compared with EPA Regional Screening Levels (RSLs) for residential soil and California Department of Toxic Substances Control (DTSC) Residential Soil Screening Levels (SLs), and the DTSC recommended background level for arsenic in Southern California. TPH as gasoline (TPH-G), diesel (TPH-D) and oil (TPH-O) ranges were compared to the San Francisco Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ELSs) for soil, as the EPA and DTSC do not have direct soil RSLs and SLs for those TPH fractions.

Metals
Metals including arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, vanadium, and zinc were detected above the laboratory method detection limit (MDL; **Table 1**). All metals were below their respective RSLs, SLs, or background levels.

OCPs
OCPs including 4,4′-DDD, 4,4′-DDE, 4,4′-DDT, alpha-chlordane, dieldrin, and endosulfan II, were detected above the laboratory MDL (**Table 1**). OCPs were not detected above their respective EPA RLSs or DTSC SLs in any of the samples.

TPH
TPH as gasoline (TPH-G) and oil (TPH-O) ranges were detected above laboratory MDLs (**Table 1**). TPH was not detected above the RWQCB Tier 1 ESLs for soil in any of the samples.

VOCs
Relatively low levels of VOCs including 2-Butanone (MEK), acetone, benzene, and toluene were detected above laboratory MDLs. VOCs were not detected above their respective EPA RLSs and DTSC SLs in any of the samples.

SVOCs
Dimethyl phthalate was detected above laboratory MDL. There is no corresponding EPA RSL or DTSC SL for dimethyl phthalate.

PCBs
PCBs were not detected in any of the samples.

Hexavalent Chromium
Hexavalent Chromium was not detected in any of the samples.
A summary of the analytical detections above laboratory MDLs with comparisons to DTSC/EPA residential

screening levels is included in **Table 1**. The laboratory analytical report is included in **Appendix A.**

DISCUSSIONS AND RECOMMENDATIONS

The analytical results reported for the soil samples analyzed during this investigation included detections of metals, OCPs, TPH, VOCs, and SVOCs. PCBs and hexavalent chromium were not detected in any of the samples. All detections of metals, OCPs, TPH, VOCs, and SVOCs were below EPA and DTSC screening levels. All detections of TPH were below RWQCB Tier 1 ESLs.

Based on the results of this soil investigation, the stockpiled soil excavated from the baseball field at Palisades Charter High School contains concentrations of constituents that are unlikely to pose a risk to human health and is suitable for reuse at the Site.

If you have any questions or need additional information, please contact Colin Campbell at (213) 310-1563 or ccampbell@trccompanies.com.

JOB DESCRIPTION

LAUSD Palisades Charter HS

JOB NUMBER

570-229869-1

Eurofins Calscience
2841 Dow Avenue, Suite 100
Tustin CA 92780

See page two for job notes and contact information.

myEOL

Eurofins Calscience

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Calscience Project Manager.

Client: TRC Companies, Inc
Job ID: 570-229869-1
Project/Site: LAUSD Palisades Charter HS

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
570-229869-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/8/2025 3:55 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

GC/MS VOA
Method 8260B: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 570-568895: 1,2,3-Trichloropropane and cis-1,2-Dichloroethene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-568895. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270C: The continuing calibration verification (CCV) associated with batch 570-570365 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are:PCHS-SP3-05082025 (570-229869-1), PCHS-SP1-05082025 (570-229869-2) and (CCVIS 570-570365/2).

Method 8270C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with preparation batch 570-569541 and analytical batch 570-570365 were outside control limits: (570-229869-A-1-I MS) and (570-229869-A-1-J MSD). The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method 8270C: The following sample was diluted due to the nature of the sample matrix: PCHS-SP2-05082025 (570-229869-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics
Method 8015B_GRO: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-569071. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job ID: 570-229869-1 (Continued)

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 7471A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 570-570438 and analytical batch 570-570493 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method 7471A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-570438 and analytical batch 570-570493 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Accreditation/Certification Summary

Client: TRC Companies, Inc
Job ID: 570-229869-1
Project/Site: LAUSD Palisades Charter HS

Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	3082	07-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8081A	3546	Solid	alpha-Chlordane
8081A	3546	Solid	gamma-Chlordane
8260B	5035	Solid	1,1,2-Trichloro-1,2,2-trifluoroethane
8260B	5035	Solid	1,1-Dichloropropene
8260B	5035	Solid	1,2,3-Trichlorobenzene
8260B	5035	Solid	1,2,4-Trimethylbenzene
8260B	5035	Solid	1,3,5-Trimethylbenzene
8260B	5035	Solid	1,3-Dichloropropane
8260B	5035	Solid	2,2-Dichloropropane
8260B	5035	Solid	2-Butanone (MEK)
8260B	5035	Solid	2-Chlorotoluene
8260B	5035	Solid	2-Hexanone
8260B	5035	Solid	Acetone
8260B	5035	Solid	Isopropylbenzene
8260B	5035	Solid	p-Isopropyltoluene
8260B	5035	Solid	Vinyl acetate
8260B	5035	Solid	Xylenes, Total
8270C	3546	Solid	1,2,4-Trichlorobenzene
8270C	3546	Solid	1-Methylnaphthalene
8270C	3546	Solid	2,4,5-Trichlorophenol
8270C	3546	Solid	2,4,6-Trichlorophenol
8270C	3546	Solid	2-Methylphenol
8270C	3546	Solid	3/4-Methylphenol
8270C	3546	Solid	4,6-Dinitro-2-methylphenol
8270C	3546	Solid	Azobenzene
8270C	3546	Solid	bis (2-Chloroisopropyl) ether
8270C	3546	Solid	Hexachloro-1,3-butadiene
8270C	3546	Solid	Hexachlorobenzene
8270C	3546	Solid	Hexachlorocyclopentadiene
8270C	3546	Solid	Hexachloroethane
8270C	3546	Solid	Phenol
8270C	3546	Solid	Pyrene
8270C	3546	Solid	Pyridine

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

APPENDIX C

Dust Monitoring Logs
